

BAC Accreditation – Key Points

This document presents a concise yet comprehensive overview of the Bangladesh Accreditation Council (BAC) Accreditation framework. The key concepts, processes, and quality assurance principles are summarized chapter-wise in an academic and professional format.

Chapter 1: Introduction to Accreditation

Accreditation is a formal quality assurance mechanism used to evaluate higher education institutions and academic programs against predefined standards. The Bangladesh Accreditation Council (BAC) ensures accountability, transparency, and continuous improvement in higher education across Bangladesh.

Chapter 2: Quality Assurance Framework of BAC

BAC's quality assurance framework emphasizes governance, leadership, academic curriculum, teaching-learning processes, research, infrastructure, student services, and stakeholder engagement. Institutions are required to establish Internal Quality Assurance Cells (IQAC) to promote continuous quality enhancement through systematic evaluation and documentation.

Chapter 3: Bangladesh National Qualifications Framework (BNQF)

The Bangladesh National Qualifications Framework (BNQF) provides a structured classification of academic qualifications based on learning outcomes. It supports Outcome-Based Education (OBE) by aligning program objectives, course learning outcomes, teaching strategies, and assessment methods with graduate attributes such as skills, ethics, and employability.

Chapter 4: Accreditation Standards and Criteria

BAC accreditation standards consist of multiple criteria covering institutional governance, academic program quality, faculty competence, research activities, physical facilities, financial management, and student support services. Each criterion requires relevant evidences including policies, reports, curriculum documents, and assessment records.

Chapter 5: Accreditation Process and Evaluation

The accreditation process begins with self-assessment and preparation of a Self-Assessment Report (SAR). This is followed by external peer review, site visits, and evaluation by BAC-appointed experts. Based on the review findings, accreditation decisions are made along with recommendations for improvement.

Chapter 6: Documentation and Evidence Management

Effective documentation and evidence management are critical for successful accreditation. Institutions must ensure systematic collection, storage, and updating of evidences. Digital documentation systems enhance efficiency, security, traceability, and transparency in managing accreditation-related records.

Chapter 7: Continuous Quality Improvement and Future Direction

Accreditation is a continuous quality improvement process rather than a one-time exercise. Institutions are encouraged to regularly review academic programs, adopt innovative teaching methods, strengthen research capacity, and enhance student support services. Future accreditation practices emphasize digital transformation, data-driven decision-making, and alignment with global quality standards.
